

PWCS Vessel Internet Access Cradlepoint Guide

The PWCS Cradlepoints are wireless access points (WiFi) which provide internet access. The following guide will step you through plugging in and connecting to the Cradlepoint:

1. The Cradlepoint needs to be plugged in to a power point. Use the correct power adapter supplied for your vessel. If the adapter needs to be changed, pull down on the adapters release button to remove/replace the adapter plug (image below)

2. The Cradlepoint needs 10 minutes to power up. Once ready, it will display the lights shown in the picture below.

3. The following WiFi networks should appear for any wireless device within range of the Cradlepoint signal:

4. The password for these WiFi networks is located on the side of the Cradlepoint.
5. It is recommended connecting to both WiFi networks.

Congratulations, you should now be successfully connected to the PWCS Vessel WiFi.
