AMBIENT DUST MONITORING – DEPOSITED DUST

Monitoring frequency for Deposited Dust Monitoring is monthly. **Note:** g/m²/month refers to 'grams per square metre per month'

On 22nd February 2016, the EPA approved an amendment to the Kooragang Coal Terminal Environment Protection Licence (EPL1552), removing the requirement for ambient air quality monitoring due to the commencement of the [Newcastle Local Air Quality Monitoring Network](#). Although Port Waratah is no longer obliged to publish ambient air quality data obtained after 22nd February 2016, for historical continuity and transparency of data for the public, ambient air quality data for the locations previously listed in EPL1552 will continue to be published.

AMBIENT DUST MONITORING – HIGH VOLUME AIR SAMPLER

AMBIENT DUST MONITORING – HIGH VOLUME AIR SAMPLER

Monitoring frequency for High Volume Air Samplers is a 24hr period every six (6) days.

Note 1: EPA Point 15 (directional HVAS-TSP, Fern Bay) operates for a 24hr period every six days. During this 24hr period, the unit operates when wind direction is from a West-Northwest to West-Southwest range for more than two minutes. When triggered the unit operates for a minimum of 6 minutes. A reportable result is when there has been a cumulative run time of at least four hours in the 24hr period. Refer to condition M2.4 of EPL 1552 for details.

Note 2: µg/m³ refers to ‘micrograms per cubic metre’

On 22nd February 2016, the EPA approved an amendment to the Kooragang Coal Terminal Environment Protection Licence (EPL1552), removing the requirement for ambient air quality monitoring due to the commencement of the [Newcastle Local Air Quality Monitoring Network](#).

Although Port Waratah is no longer obliged to publish ambient air quality data obtained after 22nd February 2016, for historical continuity and transparency of data for the public, Port Waratah will continue to voluntarily publish ambient air quality data for the locations previously listed in EPL1552.

DISCHARGE TO WATERS – OVERFLOW QUALITY

DISCHARGE TO WATERS – OVERFLOW QUALITY

Monitoring Frequency for overflow water quality monitoring is monthly during discharge.

Note: mg/L refers to ‘milligrams per litre’
